Kristin Gudjonsdottir - Steps Before Firing

Gudjonsdottir: There are things that we need to repair. You can either do that with our hands, gently, or we can take this tool. It's a basically like a rubber spatula.

This is an extra piece of clay. I want to make sure that I want to get that out. What I do is that I go around and I take it off with my favorite knife again.

My next step is to put the, uh, paint on it. This one is unusually shiny, but you won't see it shine until it fires. I think we're going to go straight down.

This little guy, it needs to dry, and, uh, that takes about, let me see a week or so. So what I do is I put a plastic bag-not completely so it sticks on it-uh, or a piece of paper or something so it doesn't dry too quickly.

End of video.
